

BK7 Negative Meniscus Lens

Negative meniscus lenses are designed to minimize spherical aberration. Negative meniscus lenses consist of a convex surface and a concave surface where the concave surface has the greater radius of curvature. In combination with another lens, a negative meniscus lens will decrease the NA of the system. A negative meniscus lens is a common element in beam expanding systems.

Specifications:

Material	BK7
Design Wavelength	546.1nm
Design Index	1.5183
Diameter Tolerance	+0.0/-0.15mm
Paraxial Focal Length	$\pm 2\%(f < 400\text{mm}); \pm 5\%(f > = 400\text{mm})$
Centration	<3 arc minutes
Clear Aperture	>90%
Surface Quality	60-40
Bevel.....	Protective

P/N	f	Φ	*R ₁	*R ₂	t _c	t _e	f _b
30601	-100.0	25.4	90.00	32.59	3.00	4.50	-99.20
